

## **noGlue – Product information**

noGlue is a low-tac polyester film coated on the reverse side with a special resin that allows this unique substrate to adhere to very smooth surfaces such as glass, steel, panels and many others.

It is not designed to adhere PVC products that contain plasticisers as these materials could have an adverse effect on the noGlue resin and its properties.

noGlue can be easily removed and repositioned many times without leaving any residual or damage to the surface to which it is applied.
